

PROBLEMS:

1. Temper tantrums—just ignore this behavior. It is a normal part of your child's development. The more attention you give to bad behavior, the longer it will persist.
2. Toilet training—too soon.
3. Fear of strangers/babysitters
4. Children need to learn to go to bed while still awake. Introduce bedtime story and cuddle time. Night waking or refusal to go to sleep is common.

NEXT VISIT:

See you at 15 months when your child will receive Pentacel (DTaP, Hib, IPV) and MMR.

Remember to talk in full sentences to your child. Revel in their understanding!
